

Evolution Simulator

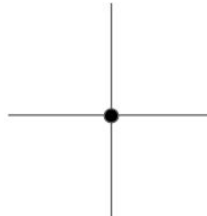

Materials Needed:

- MIMIC Evolution Crimp Set Original
- Measuring Tape (metric)
- Bubble Level
- Pencil
- Tape
- Exacto Knife / Scissors

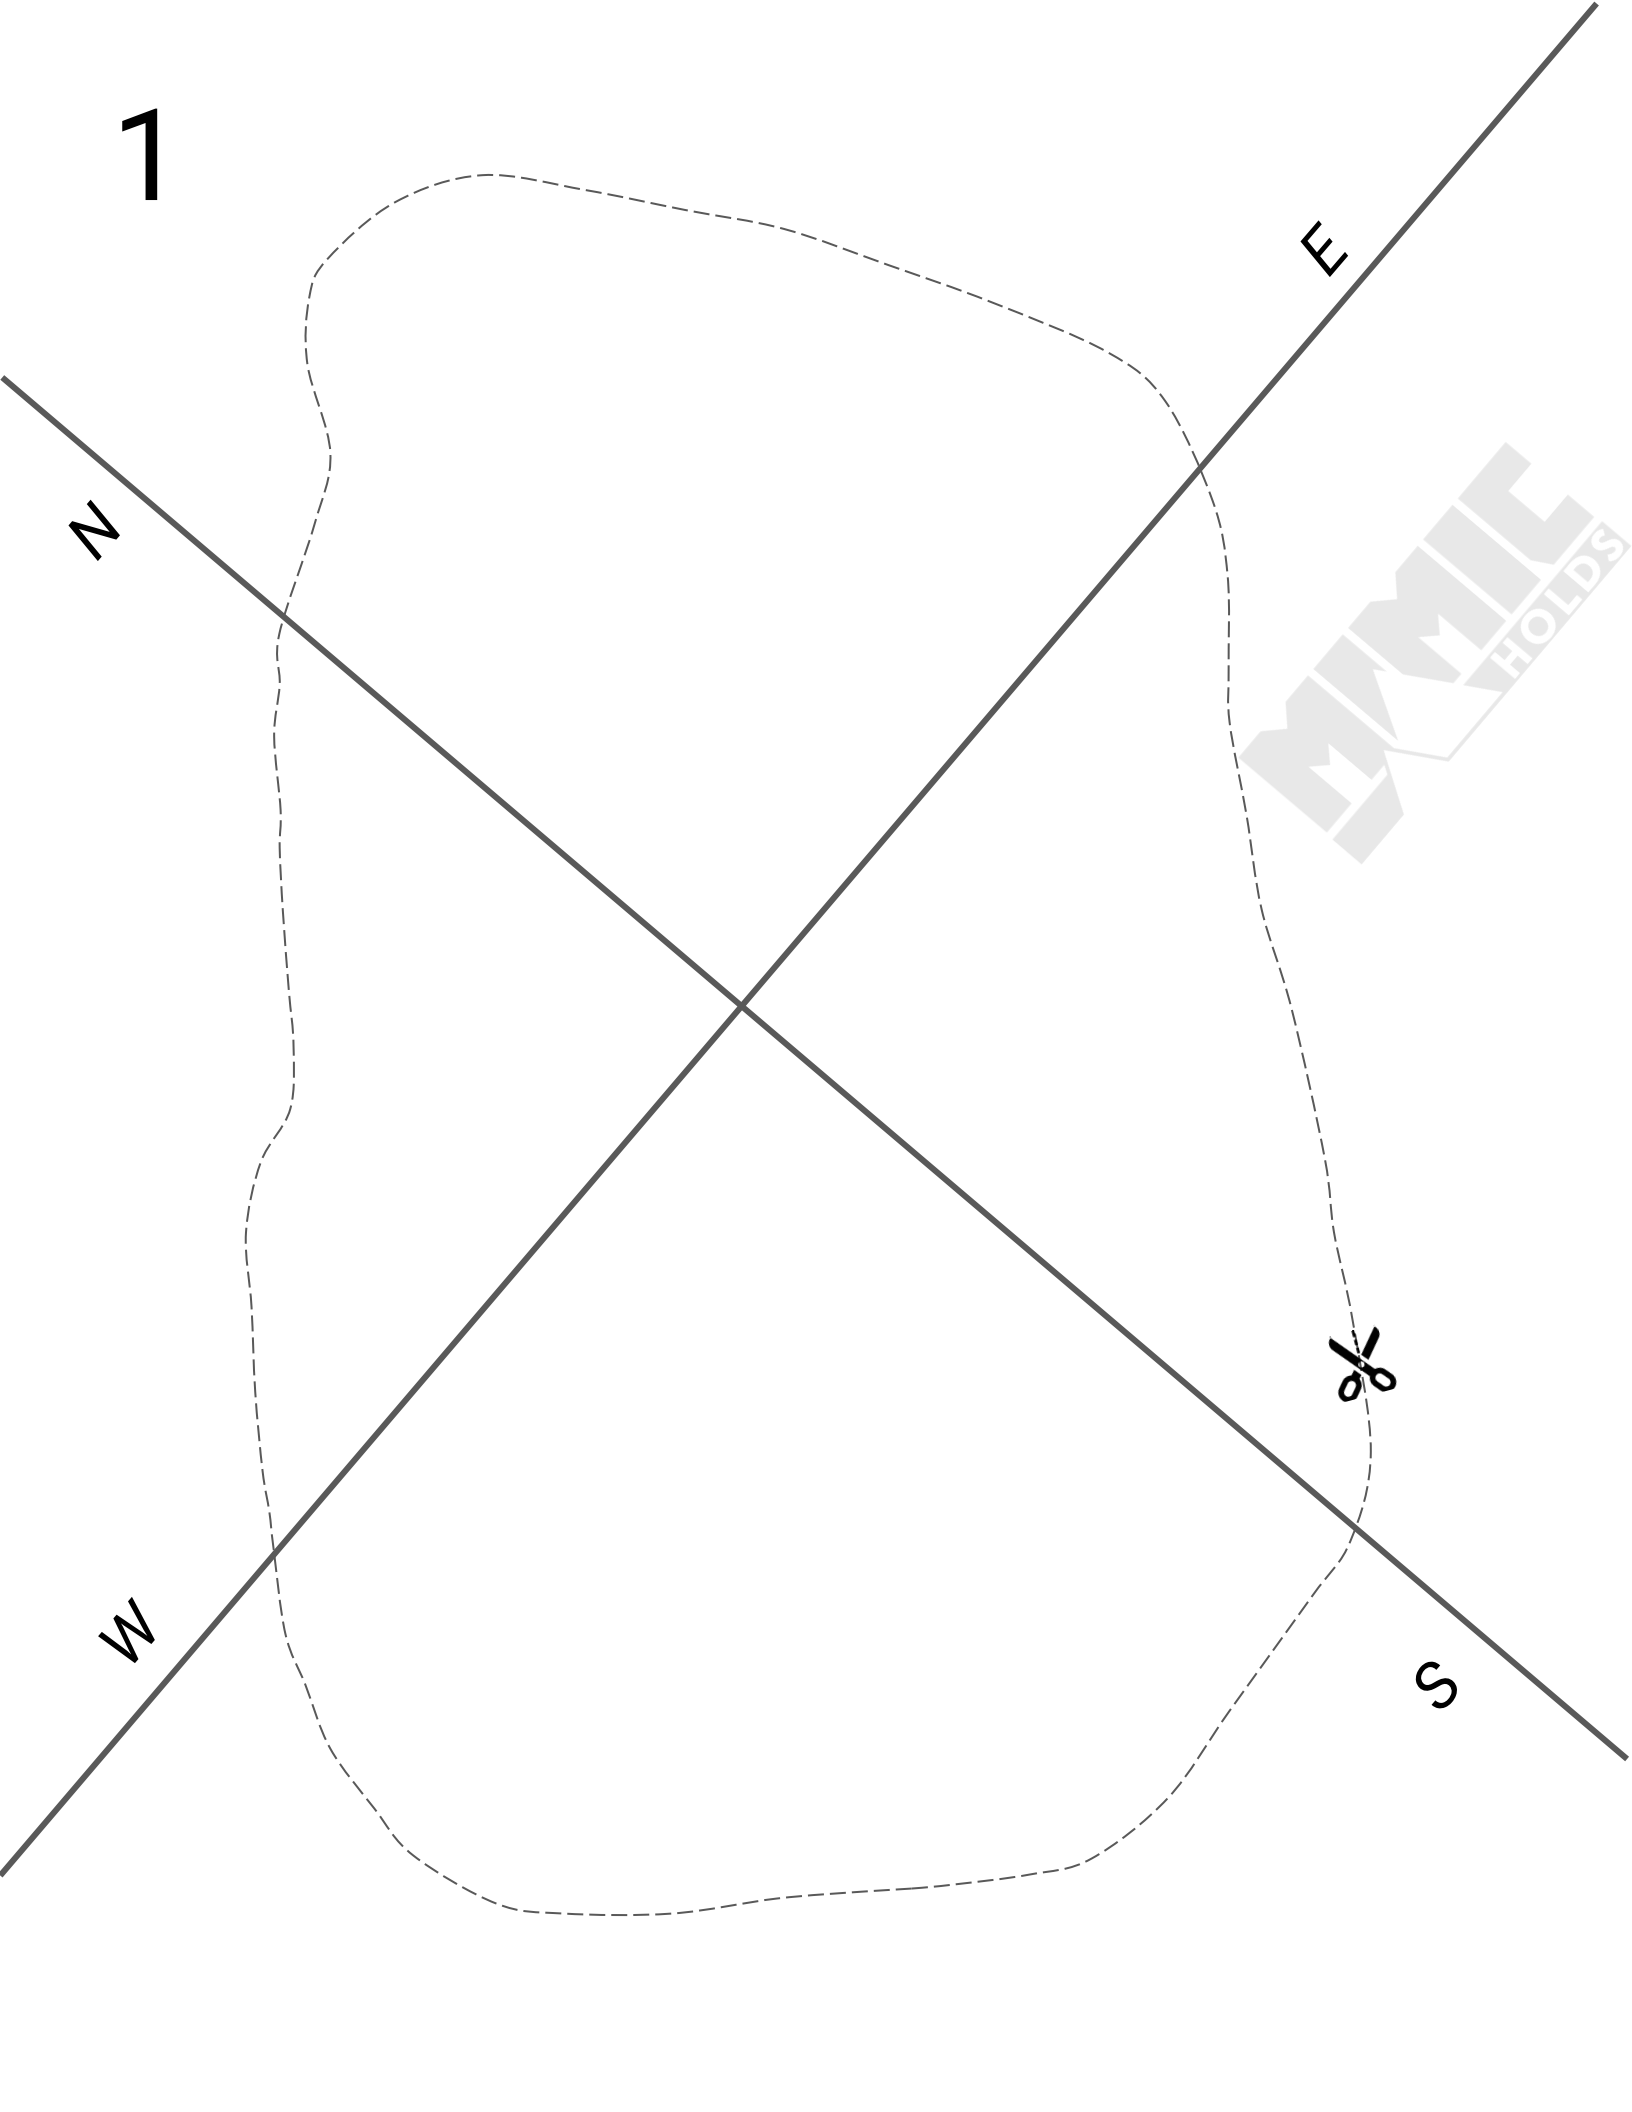

Instructions

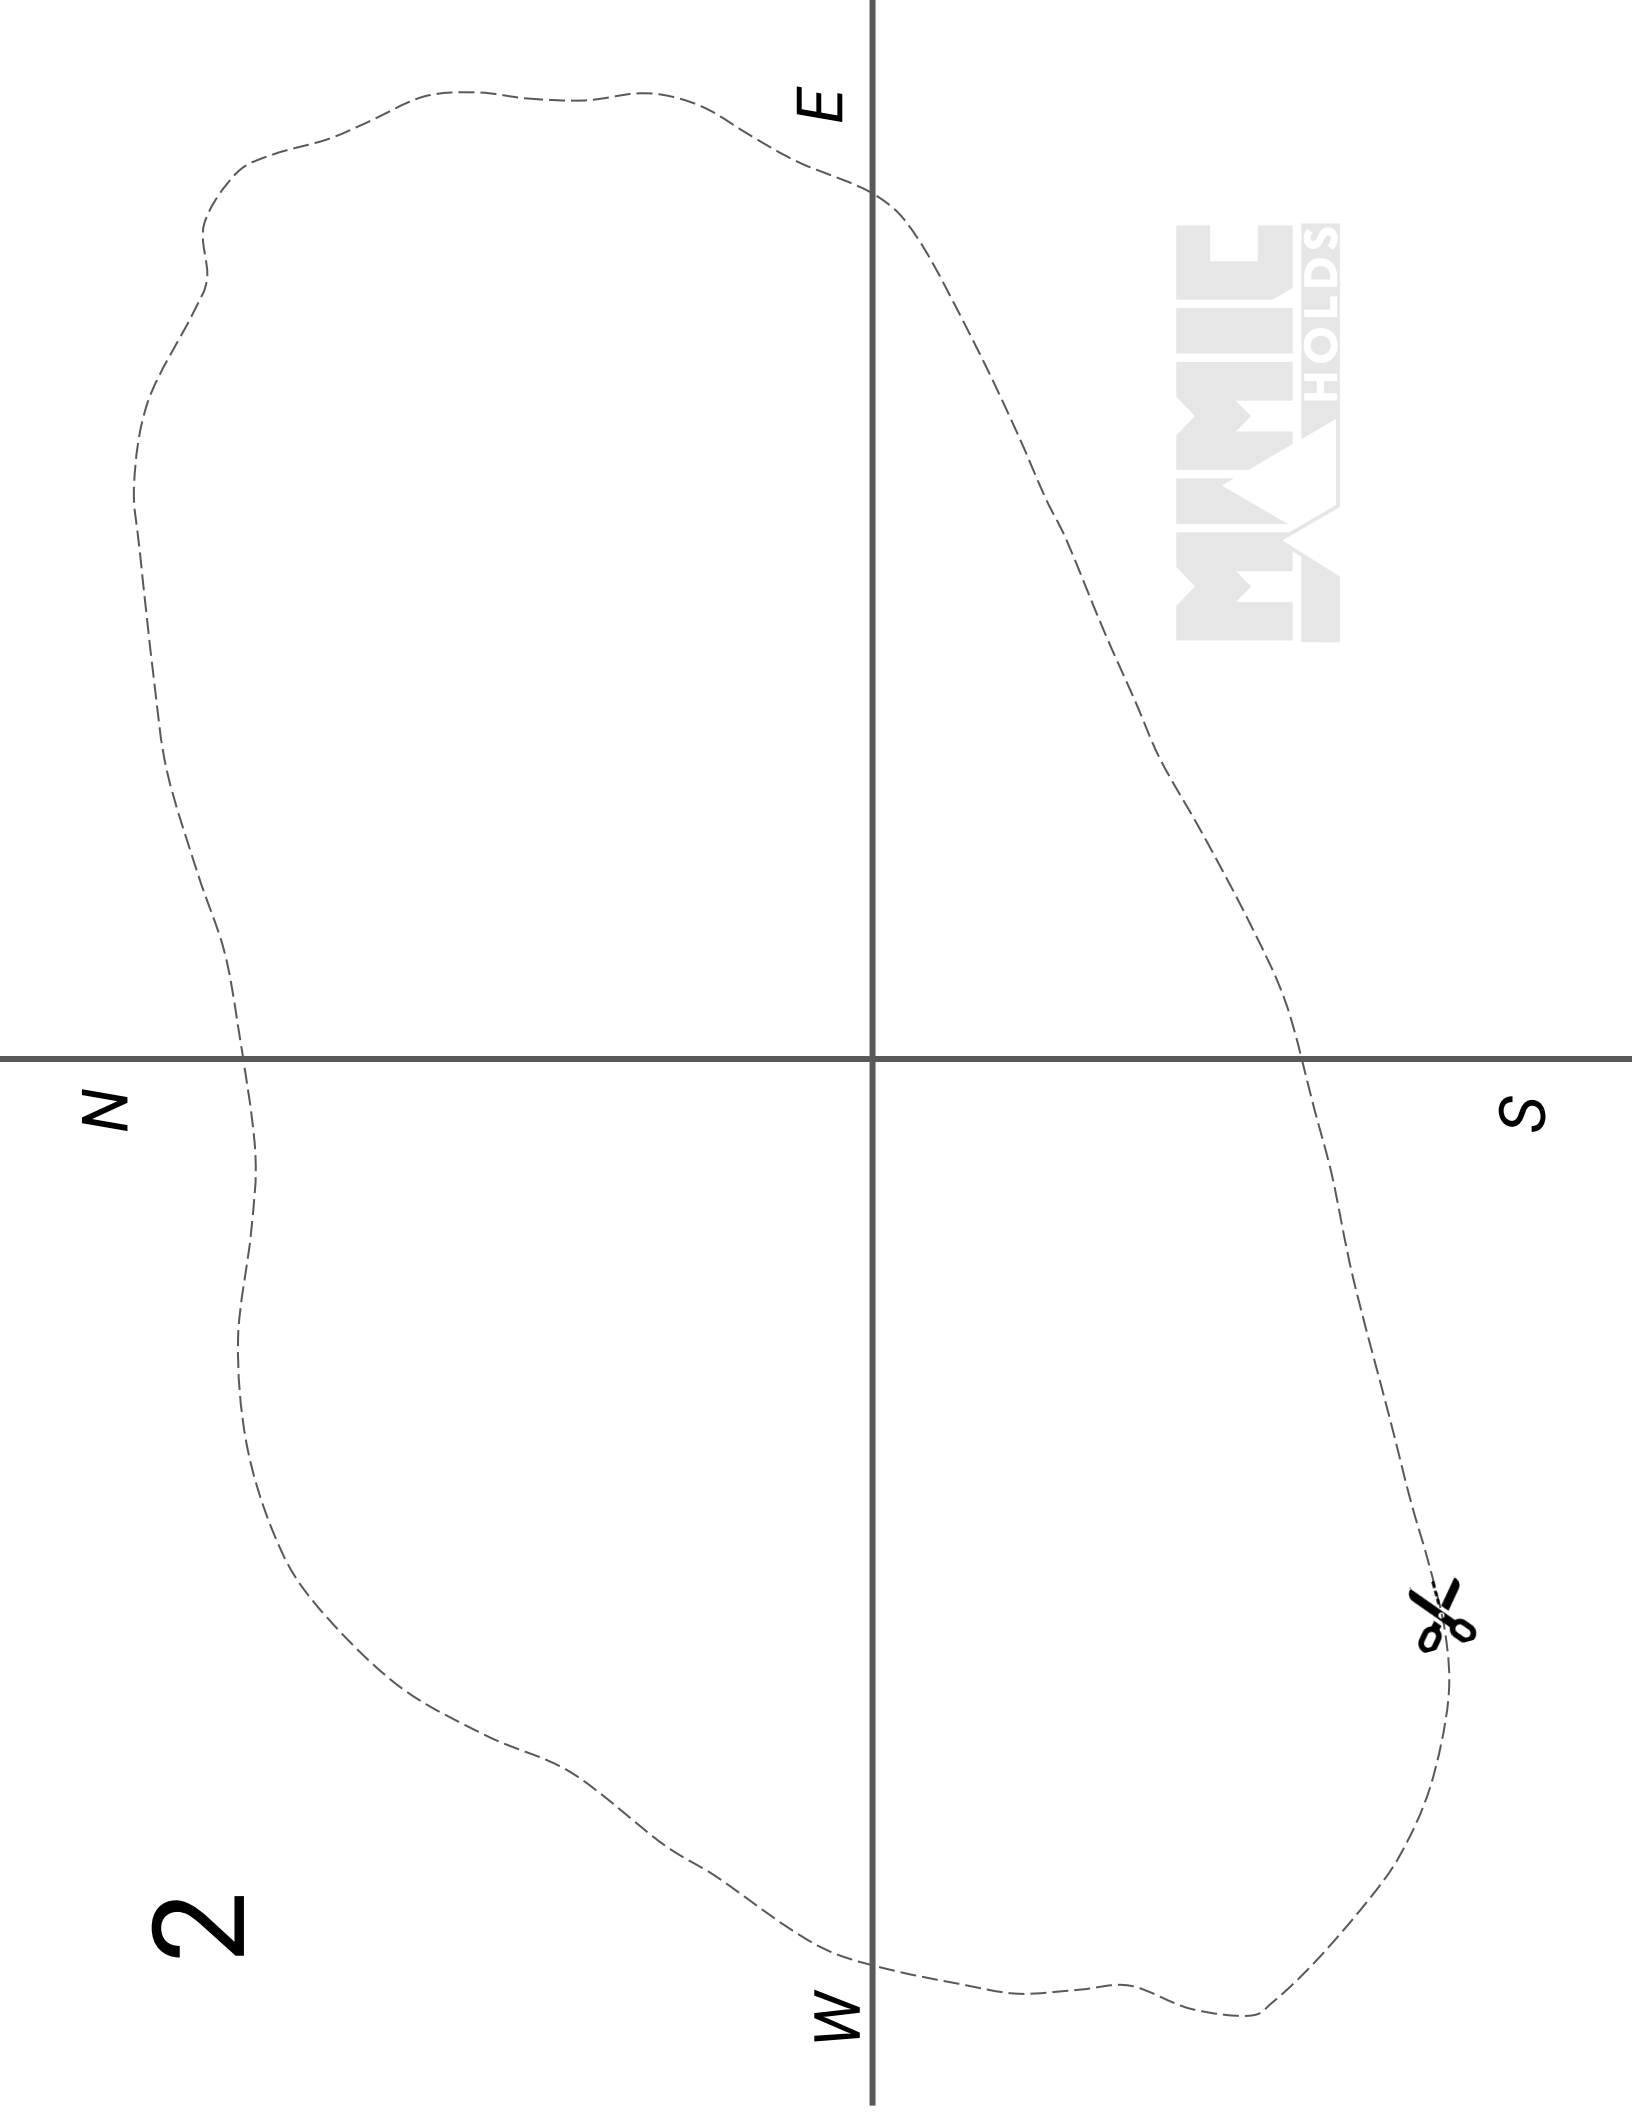

1. Choose a starting foot and use a measuring tape, bubble level, pencil, and map on the previous page to mark the positions (1-6) of the holds.
 - Use a bubble level to make sure that the horizontal and vertical measurements are square to the floor/gravity.

2. At each of the points (1-6) you marked on the wall, use a pencil and bubble level to draw ~30cm/12in.

3. Print out the hold outlines and cut the hold outlines out with an exacto knife or scissors. If you use scissors, tape the paper back together where the entry cut was made.
4. Tape the hold outline to the wall while lining up the cross lines on the outline to the pencil cross lines on the wall.
5. Place the holds in the outlines and screw into place.
